

Activity 3.5: Restaurant Reviews Page CSS

Now that you're familiar with CSS, let's make the previous activity a bit more visually appealing. We'll start where we left off with the restaurant document.

1. Open your text editor and use the open command to open the HTML you created in activity 2.6.

```
3 <head>
4 <title>Activity 3</title>
5 </head>
6 <body>
7 <h1>My Restaurant Reviews</h1>
8 <h2>The Smithy</h2>
9 <p>171 Main Street<br/>
10 Monroe, CT</p>
11 <h3>The Reivew</h3>
12 <p>The Smith has served area residents for over
30 years. The restaurant offers a full bar, and
specializes in grilled steak and seafood. A salad bar
is offered as well.</p>
13 <h3>Smithy Favorites</h3>
14 <ul>
15 <li>Filet Mingon</li>
16 <li>Loin Lambshops</li>
17 <li>New York Strip</li>
18 <li>Shrimp Cocktail</li>
19 </ul>
20 <h2>Black Duck Cafe</h2>
21 <p>605 Riverside Avenue<br/>
22 Westport, CT</p>
23 <h3>The Reivew</h3>
24 <p>A local favorite, the Black Duck has been
serving seafood, burgers and classic fare for decades.
The riverside restaurant is located in an 1840's era
barge.</p>
25 <h3>Black Duck Favorites</h3>
26 <ul>
27 <li>Broiled Salmon</li>
28 <li>Flat Iron Steak</li>
29 <li>Stuffed Burgers</li>
30 <li>Full Belly Clams</li>
31 </ul>
```

2. Immediately save that document as activity3.5.html. Make sure you save it somewhere easy to find so you don't have to search for the file later. We don't want to accidentally save over your previous work.
3. Display the HTML code in a browser so you can see how it's rendered before adding any CSS code.

4. In the `<head>` element of the document add a style element. Your document head should appear like this when done:

```
3      <head>
4          <title>Activity 3</title>
5          <style>
6
7      </style>
```

5. Let's style the `<h1>` tag so that the content within it appears in the Arial font and centered. Add the following CSS to your style element:

```
h1    {
font-family: Arial;
text-align: center;
}
```

6. Save your HTML document and refresh your browser to review the result. If you did everything correct the text "My Restaurant Reviews" now appears centered in the middle of the screen.

7. Next style the h2 and h3 tags so they appear as you would like. You can try adjusting font sizes, colors, or other aspects of the text until you are pleased with how they look.
8. Adjust the unordered list so they appear with a custom bullet graphic. You can search Google and find a bullet that you like, or design your own in a program like Photoshop. Again refresh your document in the browser so you can see the custom bullet.

Black Duck Favorites

-  Broiled Salmon
-  Flat Iron Steak
-  Stuffed Burgers
-  Full Belly Clams

Since this is a restaurant review, I made my bullets out of tiny cheeseburgers, which makes me hungry. You may download the burger bullet at <https://s3-us-west-2.amazonaws.com/labcontent/burgerbullet.jpg>.

9. Using CSS make any other changes to the page appearance that you wish. Be creative and experiment. Notice that you are altering the appearance of the page, but the content— and HTML code— is remaining the same.
